

Paul Imaz Nin

MOTORSPORT ENGINEER

DATA • PERFORMANCE • SYSTEMS • VEHICLE DYNAMICS • SOFTWARE
Donostia-San Sebastián, Spain | +34 636 525 019 | imazpaulnin@gmail.com
Spanish native | English C1 | Basque B2 | German A2

PROFILE

Motorsport engineer currently working at Campos Racing, combining engineering tool development, vehicle dynamics and competition support. Experience providing factory-based support for F2 and F3 and trackside experience in Eurocup-3 and F4. Available to collaborate on races, tests and remote engineering projects in Data, Performance, Systems, Vehicle Dynamics and Software.

EXPERIENCE

Campos Racing

March 2026 – Present

Software & Vehicle Dynamics Engineer

- Development of suspension dynamics simulation tools, virtual seven-post rig and lap-time simulation.
- Development of tools for driving, timing, race-data and performance-data analysis.
- Factory-based support for F2 and F3, preparing reports and supporting performance work.

Tecnun eRacing – Formula Student

September 2021 – June 2025

- Design and sizing of cooling systems.
- CAD design of drivetrain components for an electric single-seater.
- Setup and operation of a dynamometer test bench.
- Development of torque-vectoring control logic.
- Solid and fluid simulations (FEM / CFD).
- Data analysis and system validation.

Technical Operator, MIG Heat Treatments

June 2020

- Heavy machinery operation.
- Shot blasting and induction hardening.
- Part traceability and process data acquisition.

EDUCATION

Master's Degree in Motorsport – Competition Engineering and Mechanics

Campos Racing – Florida Universitària

September 2025 – March 2026

Bachelor's Degree in Mechanical Engineering, Bachelor's Degree in Industrial Design Engineering and Product Development

University of Navarra – Tecnun

September 2020 – July 2025

Mechanical Engineering (Exchange Program)

University of Sheffield

September 2024 – February 2025

Secondary Education and High School

St Patrick's English School

September 2004 – July 2020

PROJECTS

Trackside experience

Race and test support during the 2026 Eurocup-3 season with Campos Racing at Portimão and MotorLand as Support Engineer.

F4 test with Campos Racing as Data / Systems Engineer.

Software

Development of vehicle-dynamics study tools, from suspension analysis and a virtual seven-post rig to lap-time simulation. Tools for race-data, driving and timing analysis.

Active Aerodynamics, Final Degree Project – Mechanical Engineering (Grade: 10/10)

Design, simulation and manufacture of an active aerodynamic device to assist braking and cornering through aerodynamically generated drag. The system operates through an automatic control strategy similar to torque vectoring.

Turbo Fan Wheel, Final Degree Project – Design Engineering (Highest Distinction)

Study, design, validation and implementation of a brake-disc cooling device based on air convection, while also improving aerodynamics by reducing the vehicle drag coefficient through the prevention of wheel-wake separation.

Cooling System – Radiator

Design, calculation and manufacture of a cooling device (radiator) based on water-to-air convection.

Gearbox Optimisation Tool, Campos Racing

An application was developed which, using the engine map, efficiency and gear ratios, provides key information such as the optimum shift point, engine operating range, power utilisation and other relevant data for gear-ratio selection and optimum shift definition.

Traction Control, Tecnum eRacing

A traction-control system based on slip ratio was developed in Simulink and optimised using CarMaker with MATLAB/Simulink.

Track Test Practice, Campos Racing Eurocup-3

During the Master's Degree in Motorsport Engineering at Campos Racing, a test was carried out at Circuit Ricardo Tormo with a Eurocup-3 single-seater. The test was run entirely by the students, covering every phase of the event: pre-event preparation and truck loading, trackside engineering, performance and data-analysis roles, as well as mechanical tasks. Tyre behaviour was studied, strategy was defined, fuel calculations were carried out, driving analysis was performed, team operations were managed and the post-event report was prepared, among other key tasks.

TECHNICAL SKILLS

- CAD & 3D Rendering
- MATLAB / Simulink / Python / HTML
- ANSYS (FEM / CFD)
- CarMaker
- KISSsoft
- Advanced Excel & Microsoft tools

PERSONAL SKILLS

- Teamwork
- Leadership
- Active listening
- Flexibility and commitment
- High motivation

OTHER INFORMATION

- Driving licence and own vehicle
- Master's Degree in Personal Training and Nutrition
- First Aid Certification
